

Electrical Retrofit

Upgrade of your GenSet safety system

Previous standard application CS31PLC Series

The CS31 PLC Series is a standard module for safety systems for the L16/24, L32/40, L27/38, L28/32H and V28/32S GenSets. Since our sub suppliers have stopped the production of these modules, we have to inform that the CS31 PLC Series are no longer available from stock.

We therefore recommend that you upgrade the complete safety system to our new design in case of exchange of defective modules. In accordance with this, the monitoring system will need to be updated with a new software version - matching the new PLC application.

New safety systems

- For the GenSets L16/24 and L32/40, we introduce the ABB AC1131 series.
- For the GenSets L27/38, L28/32H and V28/32S, we have the Allen-Bradley MicroLogix 1500 series.

Both systems are illustrated on the rear side of this flyer.
